Re: Publicly traded companies participating in COP31

Dear Mr. President,

Ahead of the annual United Nations climate conference, we are writing to support your decision to withdraw from the United Nations Intergovernmental Panel on Climate Change (IPCC) and to request that you take action to ensure that U.S. companies attending the conference do not violate the law and undercut U.S. policy.

We understand that companies, including Amazon, Apple and Google, will be attending COP31 in Antalya, Turkey, from November 9-20, 2026. These companies are publicly traded and subject to regulation by the U.S. Securities and Exchange Commission (SEC). Both federal law and SEC regulations prohibit these companies from making false and misleading statements.

Companies that make false and misleading statements about climate at COP31 violate the law and also undermine U.S. energy policy and national security.

An official from the United Nations Environment Programme (UNEP) recently told the Associated Press that Trump administration energy policy would likely add one-tenth of a degree Celsius (0.1°C) to average global temperature by 2100.

That amount of estimated change in average global temperature is so small that it is unmeasurable. The emissions of Amazon, Apple and Google are much smaller than total U.S. emissions.

Not only are these companies misleading the public and potentially violating the law by giving the public and investors the impression that they are doing something about supposed “climate change,” but they are also undercutting U.S. foreign policy and national security by participating in COP31.

Moreover, Amazon, Apple and Google do significant business with the federal government yet are undercutting one of its main policy efforts.

We ask you to remind these and other U.S. companies of their legal obligations to be truthful and of their contractual and moral duties not to undermine U.S. national security.

Sincerely,
